

Explanation of Headings

Name	Name of site, landmark or geographical feature. All known names, or all names an author has shown for a site are included in ()s. Some of the other names conflict from one author to another and some are in error. However, even those named in error are usually located at or near the named site.
County	County or counties where site is located. Counties are shown as the authors of referenced books have shown them. Some authors may have used the county where the site was located at the time the site existed or last existed, and some authors show the county where it would currently reside if the site still existed.
1949 Atlas	If noted with an "X", that site can be found on the referenced 1949 Atlas.
1996 Atlas	If noted with an "X", that site can be found on the referenced 1996 Atlas.
Co Seat	If noted with an "X:", that site is a current county seat. Sites that were county seats, at one time in the past, are noted with an "x".
Type	This column lists, in general terms, the classification of the site. These are very general classifications and the notes may provide more detail as to the type of a site it is. The "Type" column was mainly used for sorting.
Reference	This column shows the number of the document where additional information can be expected to be found. Some or all of the information in the listing came from these sources.
Notes	This is identifying information about the site that came from the referenced documents. Some of the information shown here can conflict from one author to another.
S/T/R	This column contains the section, township and range of the site. Although some settlements were on multiple sections, only one of the sections is shown. When maps have shown conflicting information, or possibly when places changed location there is another S/T/R listed in the Notes section.

*Occasionally there is conflicting information from one author to another.
This publication does not resolve the conflict, but lists the information,
leaving it to the reader or researcher to resolve the conflicts.*
